

Elite Technology Engineer

Batch Eligible: 2027 Passouts

Management Level: 11

Role Overview

We are seeking exceptional early-career software engineers who aspire to build the next generation of AI-native software platforms, reusable software IP and intelligent enterprise solutions.

As an **Elite Technology Engineer** you will combine strong full-stack engineering foundations with AI-first development practices to create production-grade software, domain-specific AI capabilities and reusable engineering assets that power the future of enterprise technology. You will work on real client programmes across industries, designing and delivering AI-native applications using modern cloud platforms, AI-assisted development tools and software engineering best practices. Working alongside architects, product teams and AI specialists, you will help shape intelligent, scalable and continuously evolving software solutions.

This role provides accelerated learning through structured AI certification pathways, exposure to leading AI ecosystems and hands-on experience developing reusable AI capabilities that create long-term client value.

Key Responsibilities

- Build reusable software IP, AI-enabled platforms and engineering accelerators for enterprise solutions.
 - Design, build, test and deploy production-grade applications using full-stack engineering and cloud-native technologies.
 - Develop domain-aware AI agents and GenAI-powered applications that improve business outcomes and transform traditional workflows.
 - Use AI coding assistants and AI-native development tools throughout the software development lifecycle to improve engineering productivity and solution quality.
 - Integrate LLM APIs and AI services into enterprise applications while applying sound engineering practices.
 - Apply **quality engineering** practices including unit testing, test automation, secure coding, peer reviews and production-readiness checks, documentation and software delivery.
 - Validate AI-generated outputs and exercise sound judgement regarding reliability, limitations and responsible AI practices before production deployment.
 - Collaborate with architects, product teams, domain specialists and data scientists to develop scalable, production-ready AI solutions.
 - Contribute to reusable frameworks, technical documentation and engineering assets that benefit the wider engineering community.
 - Continuously learn emerging AI technologies and contribute to innovation through experimentation, research and engineering excellence.
-

What You Bring

Required Skills & Qualifications

- Bachelor's or Master's degree in Computer Science, Artificial Intelligence or a related discipline.
- Strong software engineering fundamentals with proficiency in Python, Java, Go, TypeScript or similar programming languages.

- Understanding of AI-assisted software engineering and modern software development practices.
 - Exposure to cloud-native technologies, APIs, containers, CI/CD and Agile delivery.
 - Awareness of LLMs, GenAI architectures and modern AI development concepts.
 - Strong analytical thinking, curiosity, learning agility and a product-oriented mindset.
 - Ability to communicate effectively and collaborate in multidisciplinary engineering teams.
-

Preferred Skills

- Exposure to Retrieval-Augmented Generation (RAG), prompt engineering or LLM APIs through coursework or personal projects.
- Exposure to agentic AI concepts and frameworks such as LangGraph, LangChain, AutoGen, CrewAI or equivalent.
- Understanding of reusable AI platforms, domain AI and enterprise AI architectures.
- Exposure to vector databases, semantic retrieval or knowledge engineering concepts.
- Knowledge of responsible AI and explainable AI practices.
- Contributions to AI-focused open-source projects, research or engineering communities

Accenture has not authorized any agency, company or individual to either collect money or arrive on any monetary arrangement in exchange for a job at Accenture. Accenture's criterion for hiring candidates is merit. Any agency, company or individual offering employment with Accenture in exchange for money is misrepresenting their relationship with Accenture, which has not authorized any such action. If you are approached by any entity or individuals who demand money or any other form of compensation in return for a job offer at Accenture - even if they present themselves as representatives or employees of Accenture - please send the details to Accenture Business Ethics Line <https://businessethicsline.com/accenture>
